MINIGLOSSARY CAPACITORS

Anode: One of two plates or conductors. In polarized capacitors, the anode should be connected to the positive conductor in the circuit.

Capacitive Reactance: The opposition (in ohms) of capacitance to the flow of alternating current, equal to the reciprocal of the product of the angular frequency (2π times frequency in Hertz) of the current times the capacitance in farads.

Cathode: One of two plates or conductors. In electrostatic capacitors the cathode is metallic. In electrolytic capacitors the cathode is a liquid, gel or other conductive material which is in intimate contact with a metallic cathodic connection.

Dielectric Constant: The ratio of the capacitance of a capacitor with some material other than air between the capacitor plates to the capacitance of the same capacitor with air between the plates. For example, the dielectric constants of air, Teflon®, polystyrene and ruby mica are 1, 2.1, 2.6 and 5.4, respectively.

Electrolytic: A capacitor with one metallic conductor (generally the anode) and with a liquid or semiconductor cathode. Nonpolarized electrolytic capacitors generally have two equal anodes as well as the liquid cathode. These anodes operate alternately as anode and cathodic connection as alternating current is applied.

Electrostatic: One of two general classes of capacitors in which two or more discrete metallic conductors are present and separated by an insulating dielectric material. Examples include: mica, ceramic, film, and paper types.

Farad: The basic unit of measure in capacitors. A capacitor charged to one volt with a charge of one coulomb (one ampere flowing for one second) has a capacitance of one farad. Capacitors are generally rated at portions of a farad (microfarads or picofarads).

1 farad (F) = 1,000,000 microfarads (μF) 1 microfarad (μF) = 1,000,000 picofarads (pF)

Impedance: All capacitors exhibit impedance. It is a function of capacitor type and internal construction. This can be particularly important in certain applications such as filters for switching power supplies. Capacitors used in these applications often have special multiple tab construction to shorten current paths and to reduce internal resistance.

Leakage Current: Expressed as dcl for electrolytic capacitors, a measure of the intrinsic losses in a charged capacitor. Generally speaking, the lower the dcl, the higher quality the capacitor.

Power Factor: A measure of the overall efficiency of a capacitor. Power factor ratings take all internal losses into consideration in a complex formula. This parameter of certain capacitors is often very important in AC applications such as motor-start and/or motor-run capacitors

Rated Voltage: The rated working voltage of a capacitor. Generally expressed in DC Volts (Vdcw). This is the voltage at which a capacitor may be safely operated at 25°C continuously within its overall parameters.

Ripple Current: The total amount of alternating and direct current that may be applied to an electrolytic capacitor under stated conditions. In general, the higher the ripple current applied, the shorter the operating life of the capacitor will be. Application of significantly higher than rated ripple currents can shorten the capacitor life dramatically and may even cause catastrophic failure (explosion).

Surge Voltage: The momentary surge voltage which may be applied for a stated length of time without doing permanent damage to the unit.

Temperature: Capacitors are generally rated at 25°C at sea level under specific humidity conditions. Operating temperature ranges are also given, along with derating (reliability) curves for operation at temperatures other than 25°C.

Temperature Coefficient: Expressed as TC in ppm (parts per million) or in percent (%) from the norm of 25°C. This is seldom a straight line and may vary widely for certain types. Most capacitors have positive TC in that the capacitance increases as temperature increases. Some types, however, have negative TC in that the capacitance decreases as temperature increases.

eem MINIGLOSSARY of CONNECTORS

Connector terminology is often quite confusing. This confusion starts with the very names of connectors. The name of a connector may derive from its shape, application, type of conductor or even method of termination.

Shape—Circular, cylindrical, and rectangular.

Electrical application—High voltage, RF, microwave, input/output, etc.

Mechanical application—Printed circuit, rack & panel, cable, etc.

Conductor type—Coaxial, flat cable, ribbon cable, flex circuit, etc.

Termination method—Wirewrap, soldercup, solderless, etc.

Hardware such as clamps, hoods, and adapters are frequently used to convert cable connectors to rack and panel types. This adds to the name confusion. A very common telephone connector, for example (the "C" type) got its name from the model number of the original maker.

Contact: The part(s) of the connector that actually provides circuit continuity between its two sections—the parts which are normally mated. The back end of the connector should properly be called the *termination*. This is the point where the wires or PC board is attached to the connector.

Contact alignments: Often called *contact float*. Describes the amount of allowable contact movement within the connector body. Permits self-alignment.

Male vs. female: In the U.S. this describes the contact construction. In Europe this term is more often used to describe the outer shell mating action which may be the reverse of the contacts.

Closed entry: A female contact which prevents entry of a male contact larger than a specific size.

Open entry: A female contact designed for a specific size of male contact but which will allow entry of larger male contacts by spring action.

Hermaphrodite: Contacts or connector bodies which are the same configuration. Male/female designations do not apply. Bodies usually have some mechanical means for maintaining polarity.

Hermetic seal: Glass-to-metal seals at terminations. Often used improperly to describe vacuum-tight seals.

Waterproof seal: May or may not be truly *waterproof*. May prevent easy entrance of casual water by means of a rubber or other boot.

Printed circuit connector: Connectors which are used in conjunction with printed circuit boards. There are two distinctly different styles.

Edgeboard. May be called *edge* or *card*. The printed circuit (PC) board edge enters the connector.

Two-piece: One part of the connecting pair is physically attached to the PC board itself. The other part is attached to something else such as a cable or a motherboard.

Readout: Describes the arrangement at the terminating edge of a PC board. May be single or double. A double readout PC board has termination strips on each side not usually interconnected.

Ribbon connectors: A type of connector which allows flat "ribbon" cable to be attached to a round or rectangular connector but also used interchangeably for flat connectors to flat cable.

Ribbon contact connector: Describes the contacts in a rectangular connector which have a self-wiping mating action. Not the same as ribbon connector.

Solderless terminal: Any style of termination which does not require solder for a permanent connection. See *crimp* and *insulation displacement*.

Crimp termination: A stripped wire is inserted into a barrel or trough which is then crimped to the conductor with a suitable tool.

Insulation displacement: Unstripped insulated wire is fitted into a channel containing metal teeth which are forced through the insulation to make contact with the conductor.

Service rating: The maximum rated voltage and/or current which may be applied continuously. May be called *working voltage*. Can be confused with the term used to describe how many times a connector may be mated and separated.

Withstanding voltage: Also called *test voltage*. The voltage a connector must withstand for one minute without breakdown. Applied between connectors and between connectors and shell and any grounding devices of the connector.

MAXIMUM CURRENT CAPACITY—CONDUCTORS

ecm MINIGLOSSARY ENCAPSULATION

MATERIALS/HANDLING

Catalyst: A substance which changes the *rate* of chemical reaction. Very small quantities can cause fast change.

Conformal coating Sprayed or dipped. A thin conformal jacket which protects an assembly from moisture or other degrading environments.

Curing agent: See catalyst.

Hardener: See catalyst.

Hermetic: A permanent gas-tight seal.

RTV: Room Temperature Vulcanizing. Associated with silicone rubber sealants which vulcanize at room temperature.

Thermoplastic: Plastic materials which can be made to flow *repeatedly* with the application of heat.

Thermosetting: Plastics which once cured cannot be made to flow again.

Thixotropy: The property of a coating compound which has low viscosity when agitated, but which thickens when the agitation ceases.

Viscosity: Measured in units of *poise* or *centipoise*. The property of a liquid which resists internal flow. Low viscosity equates with thin and vice-versa.

PROCESSING

Casting: Parts or assemblies are placed in a mold. Encapsulating material is added and cured. Part is then removed from the mold.

Dip coating: Part or assembly is dipped into the encapsulating material. Final thickness is determined by number of dips, viscosity, rate of withdrawal, and temperature.

Embedding: Wherein an encapsulant substantially fills all voids in and about an assembly.

Impregnation: A process of encapsulation involving evacuating all air and then allowing the encapsulating material to flow in and fill all voids.

Molding: Similar to casting except this process usually implies multicavity molds and costly machines.

Potting: Wherein the part or assembly is immersed in an encapsulating material contained in a shell which becomes a permanent outer surface after curing.

DIELECTRIC

Arc resistance: An encapsulant's resistance to the formation of a conductive path or track. Measured in time.

Breakdown voltage: The voltage at which an encapsulant fails electrically.

Capacitance: The property of conductors and dielectrics which allows the storage of an electrical charge when the voltage is applied.

Corona: A luminous discharge of electricity due to air ionization when a certain voltage is reached. Can be internal or external. The formation of ozone can cause rapid deterioration of certain materials.

Dielectric: Insulator (Nonconductor.)

Dielectric constant: The property of a material that determines its ability to store electrostatic energy.

Dielectric strength: The ratio of dielectric breakdown to the thickness of insulating material.

Dissipation factor: The ratio of a dielectric material's energy losses.

Flashover: Point at which an electric discharge occurs around an edge or across a surface. Can result in a carbon track and permanent degradation.

Insulation resistance: (IR) An insulating material's total DC leakage.

Surface resistivity: The resistance of the surface of an insulating material to the flow of direct current.

Voltage endurance: Sometimes called corona resistance. The ability of a material to withstand the application of sustained high voltage.

Volume resistivity: The resistance of a material to direct current flow as a measure of volume. Expressed as ohm-centimeters.

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $2.00 for postage and handling. An invoice will be mailed to you under separate cover.

Don't waste any more time. Get organized now!

ALL NEW with this edition of EEM

GET ORGANIZED!

Are your catalog files organized? Can you find any given catalog in a matter of seconds? If your answer is "Yes," you probably already have the EEM File System. But, if you said "No," you really ought to look into this simple system. It will save hours of time and tons of aggravation.

The EEM File System was invented over twenty-five years ago to help people who specify, buy, or work with electronic products and equipment. It is upgraded on a constant basis to reflect the current state of the art. It's easy to use and easy to customize to your particular needs.

You say you want to file catalogs by type of product? That's easy to do with The System. But, what are you going to do when there are multiple products in one catalog? Take Mallory for example. There are all kinds of products in the Mallory Short Form Catalog. With the EEM File System all you do is file the catalog under "M" for Mallory and refer to it on all of the cross reference cards that apply.

There are thousands of EEM File Systems in everyday use in engineering and procurement offices all over the world. Shouldn't you be using this proven system?

The EEM File System is shipped in one neat package. The package contains everything you need to set up your very own filing system. Best of all, it's easy to get and very affordable. Send a check or money order for $25.00 and EEM will pay the postage and sales tax. If you must use a purchase order, please add $2.00 for postage and handling. An invoice will be mailed to you under separate cover.

Don't waste any more time. Get organized now!

- **Standard Enclosures** - More than 118 models are currently in production. In stock at electronic distributors throughout the U.S.A. and worldwide. Standard Enclosures may be ordered as Prototype Kits (with all components necessary to assemble one enclosure) or as Production units (supplied without panels, card guides or mounting rails in certain models).
- **Machine Modified Standard Enclosures** - Modifications are made by CNC machining of standard models.
- **Custom Modified Enclosures** - In-mold modifications are made using unique, low cost tooling for specified "insert" areas of the enclosure. May be combined with CNC machining.
- **Custom Enclosures** - Contact factory for design support and quotations.
- **Prototype Kits** - Contain all components needed to assemble one unit. Certain C and CL Models are available in Kits which can be easily assembled into a choice of pre-selected heights; see pages 3 and 6.
- **Design Support** - With more than forty years experience in design and production of quality products the PacTec engineering staff can collaborate in every phase of your product design cycle; from pre-production prototype to totally custom original designs. Modifications can be made to top and bottom covers, front and rear panels and includes provisions for positioning PCB's and LCD's, controls and access points for Input/Output devices.

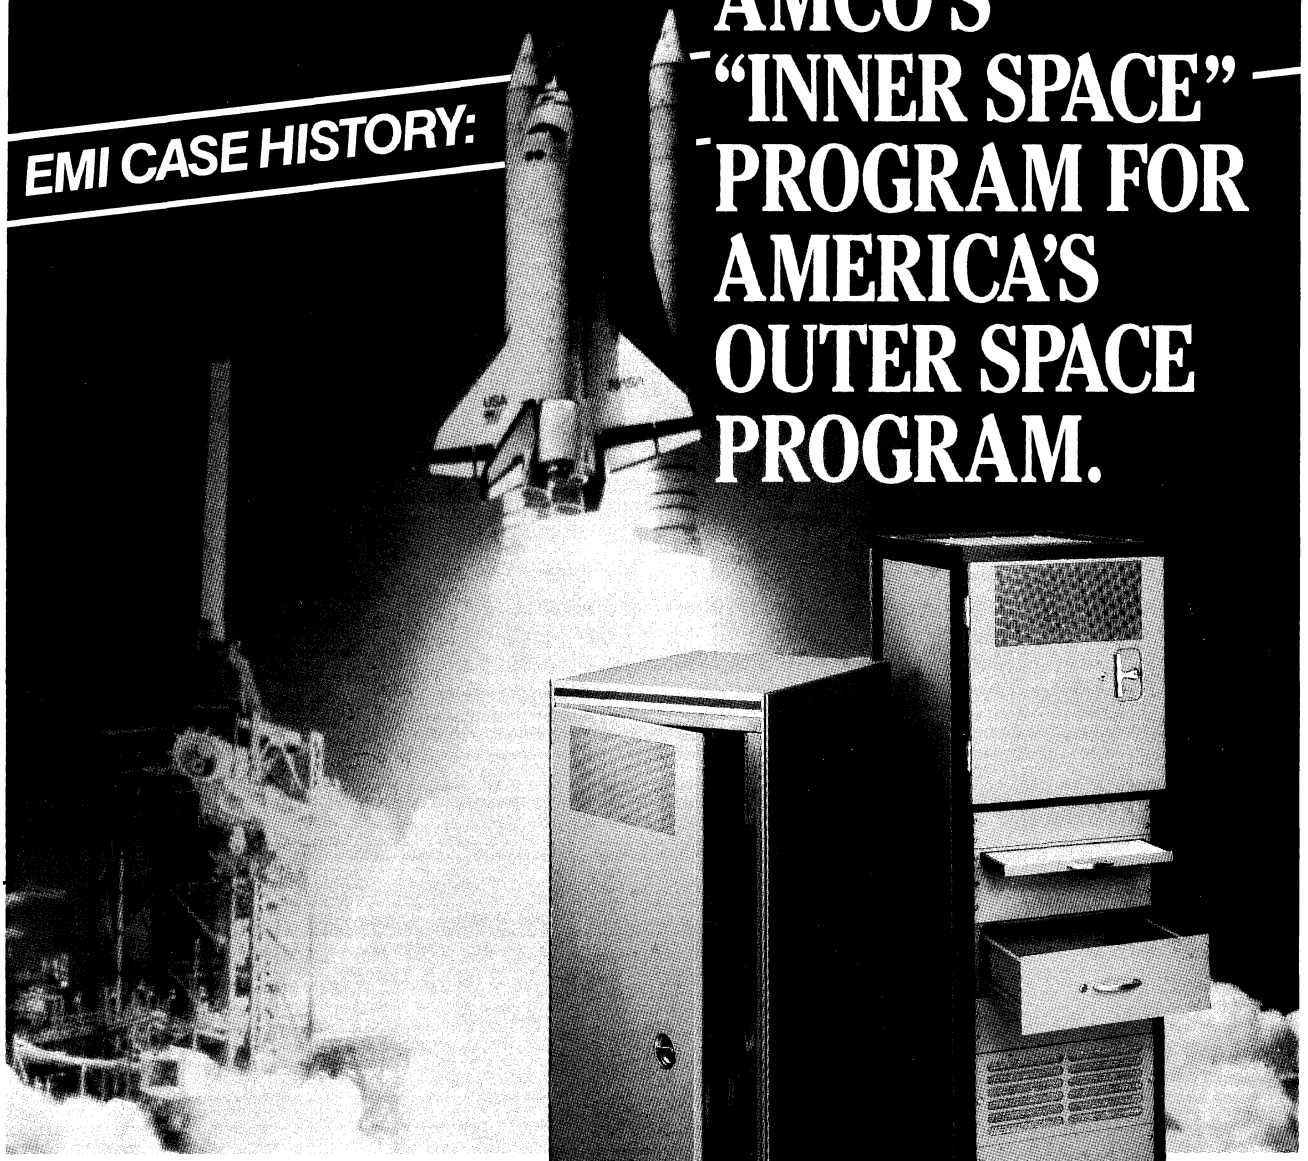
EMI CASE HISTORY:

AMCO'S "INNER SPACE" PROGRAM FOR AMERICA'S OUTER SPACE PROGRAM.



Before America went for the moon, NASA came to AMCO. Specs for electronics/communications/computer cabinetry were about as demanding as they come.

We designed the first modular EMI system for NASA. With all the ultra-tight tolerances, cooling requirements, and design efficiency NASA demanded—AMCO never missed a shot.

Today, we take MIL 285 and TEMPEST in stride, because we got there first. Just like America on the moon.

Check out AMCO for your own inner space program. Get Catalog 204 for military and heavy duty, 650 for FCC and commercial.

All ELMA products are available off-the-shelf and REASONABLY PRICED

General Information

ELMA enclosures are designed for ease of assembly, versatility, and durability. Their modular design offers virtually unlimited electronic packaging flexibility. Standard Eurocard (100 x 160 mm, 3.94 x 6.30 in.) and card sizes derived therefrom are easily accommodated. Compatible to VMEbus and MULTIBUS II board formats. With internal subdivisions, any card size can be used. In addition, all edge connectors currently in use can be fitted using supplementary assembly sections.

Material

Aluminum extrusions form the framework of all these **ELMA** cabinets. Front and rear panels are 2½ mm clear anodized aluminum sheets. Cover panels are either 1.5 mm colored, vinyl coated aluminum sheet (models 14, 32, 36) or 3 mm colored, vinyl coated alucobond (two sheets of aluminum separated by a polyethylene core).

Accessories and Colors

Front and rear panels are accessories on all models except 36, for which rear panels are included. Hinged and folding front panels may also be obtained in a variety of sizes for some models. Extruded front panels in various heights and widths can be used for plug-in modules. Aluminum handles are also available.

Cover panels are included on models 32 and 36. Standard colors are neutral umbra-brown, and blue (model 36). Graphite black, brilliant blue, and gray cover panels are available on special order. Perforated top and bottom panels may also be obtained.

Dimensional Units
1U = 1.75″, 1T (HP) = 0.20″

The overall height of modules, card frames and plug-in cases and the acceptance height of cabinets is based on height units (U) per DIN Standard 41494. One U equals 1¾″ or 44.45 mm. The 5.08 mm (2/10″) horizontal pitch unit T is used for the acceptance width. The 19-inch insert width (483 mm) of the 19″ floor cabinet corresponds to the overall width of 19″ modules, 19″ card frames, 19″ cases and the 19″ cabinet front panels.

Specifications

Material - Impact resistant ABS. A flame retardant grade meeting UL94V-0 standards is optional. Standard models are manufactured in four molded-through colors: tan, gray, black and PC bone. Molded-through colors reduce the visibility of chips and scratches, virtually eliminating the need for refurbishing after assembly.

EMI/RFI Resistance - Provided as an option. Shielding is a factory applied, nickel or copper base, conductive coating. PacTec can produce enclosures that test at a maximum of 1 ohm per square. Other shielding materials are available upon request including silver and graphite, etc.

Custom Panels

Custom panels enhance and distinguish your product from all others and can at the same time provide significant cost savings through reduction of assembly costs and the elimination of secondary operations. Die cast zinc and molded plastic panels can incorporate posts or bosses to mount components, flanges to hold PC boards, ventilation slots, speaker grills, display bezels and openings for controls and LED's.

Custom panels are also available manufactured of punched and blanked flat aluminum sheet and printed plastics, including for example, vinyl, polyester, polycarbonate, polystyrene and other materials.

A recently developed product consists of printed vinyl hot-laminated to flat aluminum sheet.

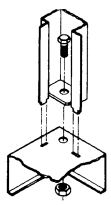
MODULAR VERTICAL ENCLOSURES

MVE SPECIAL FEATURES

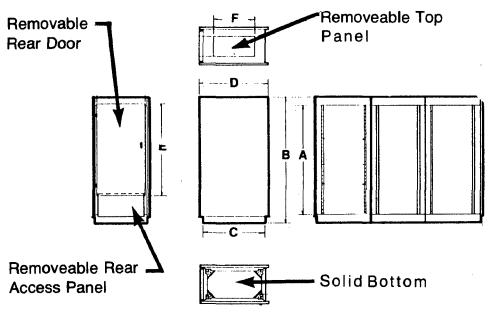
- **Unique Corner Post Design** PFT combines two unique design features to provide strength and rigidity previously associated only with more expensive welded units. Interlocking tab and slot construction in the corner joints eliminates torsional movement of the corner posts. Secondly, a heavy gage mounting plate is welded, slightly recessed, into the top and bottom of each corner post. Thus, when the corner belt is tightened, the cabinet base (or top) flexes slightly, ensuring that the joint is always preloaded in tension, providing additional rigidity.



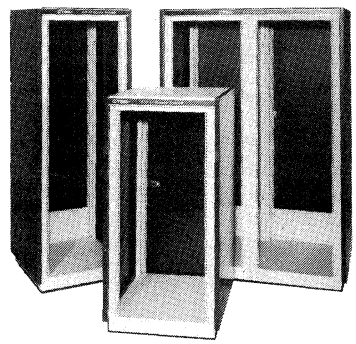
- **Knock Down Units Reduce Shipping Costs.** PFT Modular Enclosures save up to 66% in shipping costs -savings which are passed on to you.

- **Modular Construction Reduces Parts Replacement Costs.** Never replace an entire enclosure again. All PFT cabinet parts, including frame components, are removable, interchangable, and replaceable.

- **Full Line of Accessories.** A full line of accessories to add versatility and to enhance the performance of your vertical enclosures is available. The line includes: plexiglass doors, casters, blower unit, louvers, door locks, drawers and more. Turn to the next page under the **VERTICAL ENCLOSURE ACCESSORIES** heading for a complete list. Note: 17" wide MOD-U-LINE with rack side panels fits 19" vertical enclosures.



Modular Vertical Enclosures are "tough as welded" with the cost savings and versatility of knockdown enclosures.



VERTICAL ENCLOSURE FEATURES

Construction: Heavy duty steel construction ensures durability. Corner Posts - 13 gage C.R.S. Top and bottom assemblies -14 gage C.R.S. All other components - 18 gage C.R.S. All metal forming, welding, and painting is done in PFT manufacturing facilities.

Ease of Assembly: PFT's self-registration design enables quick and routine assembly. One person can assemble these vertical enclosures in minutes. Unique tab and slot engineering ensures all parts accurately self-align.

Colors and Finish: Enclosures are finished with oven-baked, EPA - approved paint. Rear door and side panels have a textured Royal Blue finish. All other components are textured in Ash White. This color combination harmonizes with standard electronics industry products. Other colors are available as modifications.

Multi-Bay Add-Ons: Modular enclosures are designed to bolt together easily and securely to form multi-bay configurations in any quantity. A variety of special multi-bay accessories is available. Turn next page under **VERTICAL ENCLOSURE ACCESSORIES** for a complete list.

Modifications: PFT will make in-plant modifications to your specifications. See next page under the **STANDARD ENCLOSURE MODIFICATIONS** heading for a list of available modifications.

To Order: Select the desired PFT model number from the table, for example: **MVE 19-61-25.** For multi-bay configurations add the appropriate suffix, ie. for **DOUBLE BAY** order: **MVE 19-61-25-2.**

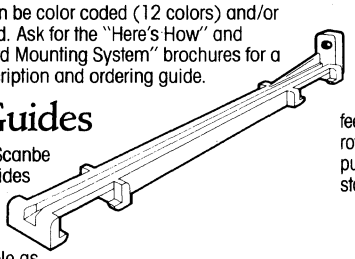
CARD CAGE COMPONENTS

Build your own card cage from these *five basic parts*—card guides, mounting bars, spacers, mounting feet and end plates. Thousands of possible combinations can be assembled.

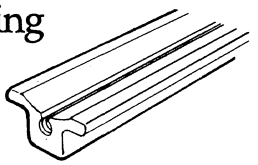
All items can be color coded (12 colors) and/or hot ID stamped. Ask for the "Here's How" and "Snap File Card Mounting System" brochures for a complete description and ordering guide.

Card Guides



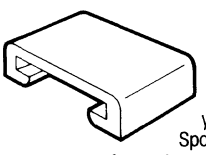
The patented Scanbe "T" series guides have integral connector mounting feet or are available as Thru-Guides for separate connector mounting components. Lengths 2.750" to 12.815". Also Snap-In Guides 2.500" to 12.000".

Mounting Bars



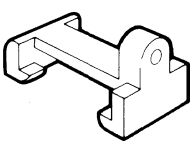
For "T" Series Guides and "A" Series mounting feet, up to 24" length, for single and multiple card rows. For Snap-In guides mounting bars are prepunched with .5, .6, .7 or .75" centers. 17" length standard, but can be cut to length.

Spacers



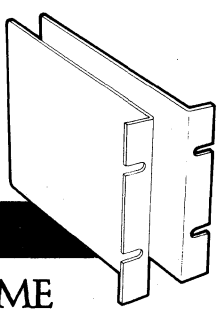
Adjust the nominal .500" width of "T" Series card guides to your card spacing. Spacers 0.031" to 1.000" for card spacing 0.531" to 1.500".

Connector Mounting



Thru-hole or with 4-40 threaded brass or stainless steel inserts. Available as "A" Series nylon mounting feet that slide on mounting bars, or as a connector mounting bar for high insertion force connectors.

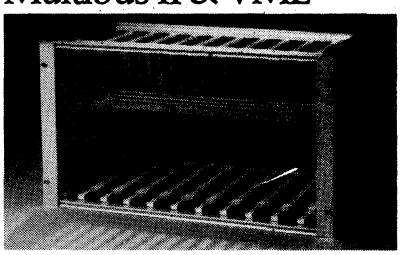
End Plates



Mate with mounting bars and provide ears for rack or panel mounting. Heights 5.22" to 17.47", depths 8.25" to 11.25".

CARD CAGES

Multibus II & VME



Scanbe's Eurocard cages come in hundreds of combinations from 3U to 9U heights, 100mm to 400mm depths, and from 3 to 21 slots. Universal mount, vertical rack mount and horizontal rack mount are available.

For VMEbus or Multibus II, high quality J1 backplanes are installed and tested—J2 backplanes are optional.

Multibus I

The MICRO-FILE™ line of Multibus cages is available with 4 to 26 slots, with or without low noise backplanes, and in universal mount, vertical rack mount or horizontal rack mount.

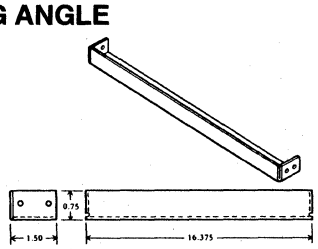
MA-1.5 MOUNTING ANGLE



The Mounting Angle is used to attach card guides and other interior parts when a full-length, -height, or -width platform is not required or would impede the flow of cooling air. It also adds torsional stiffness to chassis used in extremely demanding environments.

Each heavy-duty MA-1.5 is made of 0.090"-thick, clear-iridited aluminum, and is supplied with captive attachment hardware. It is an "L"-shaped solid which mounts to pre-drilled chassis holes in any of four useful orientations.

Order SB9-, SB12-, and SB19-Series parts from this table. Parts in each column mate with others of the same depth.

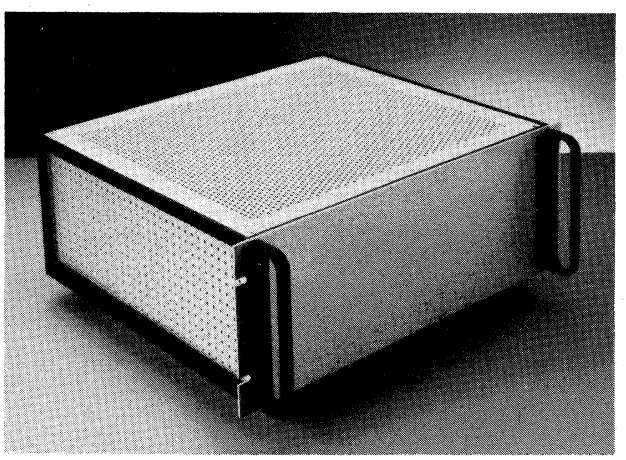
VCD series
Variable Chassis Drawer

Same-day/next-day shipping

V for VARIABLE: meaning VCDs can be assembled into even more thousands of configurations than any of Techmar's previous widely used enclosure lines.

CD for CHASSIS DRAWERS: meaning VCDs are for assembly in EIA racks and rack cabinets. Among many new design improvements:

- Assembly-hole pattern is on 7/16" centers both vertically and horizontally, 1/4 of the EIA height increment.
  FOR YOUR CONVENIENCE: This 90-degree symmetry allows you to mount card cages for front, rear, top or bottom loading, without having to drill special holes, while retaining Techmar's long-time previous hole pattern's advantage of regularizing the locatability of internal parts relative to tops, bottoms & centers of your chassis drawers. And the new hole patterns give you the help of smaller pitches for locating internal parts.
- Your choice of nine color combinations.
- You can machine your mounting surfaces in the flat before you assemble edge-stiffeners.
- Convertibility between VCD rackmount and VSA stand-alone models for benchtop applications [see next page].
- Phone for free full-color catalog.



VCD Kits

If you order a standard kit by height, depth and color but no other dash or dot numbers, you will receive the parts & hardware for an assembly which includes a 12-piece frame of extrusions, standard front panel, handles, structural side panels with assembly-hole pattern, top/bottom perforated covers, & outside back panel, all in whatever color combination you specify. By adding a dot SC, you also receive Side Covers to hide the assembly holes and screwheads on the side panels. Some of the thousands of other kit options ready for immediate shipment are shown below. So are a few of the much larger number of configurations that are available to you whether you choose to order as kits or as individual parts.

VSA series
Variable StandAlones

Same-day/next-day shipping

This is an exceptionally sturdy and decorative enclosure line for benchtop/desktop instrumentation. Its parts are the same as for a VCD kit of the same height, depth and colors, with the following exceptions: The front panel is normally 17 wide and recessed instead of 19 wide; handles are backed by spacers instead of panel ears; side covers & rubber feet are included; one-third perforated covers are standard unless otherwise specified. And as with the VCD line, you can choose from a large variety of options & accessories, including card cages & other internal mounting parts. Call the number below for free catalog and/or applications assistance.

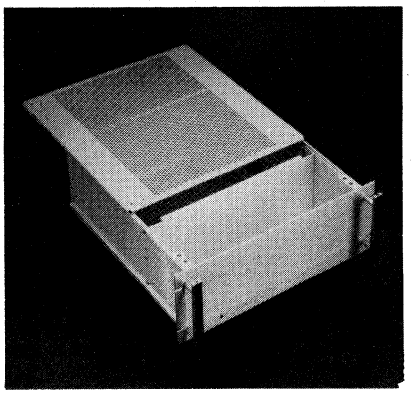
SRK/CRK series

Seven-eighths-spacing Rack-mounting Kits

Same-day/next-day shipping

Stocked for one-day shipping in your choice of 28 combinations of seven heights and four front-to-back depths, and with 7/8" vertical and 1/2" horizontal hole pattern, this SRK/CRK line of chassis drawers can be assembled in a vast variety of configurations without special hole drilling or punching. Double bends in side frame flanges & heavy-duty alumalloy materials make them extra sturdy. Order today, and they're on their way to you tomorrow! Phone toll-free number below and request your free full-color SRK/CRK catalog.

SRK Kits and Parts

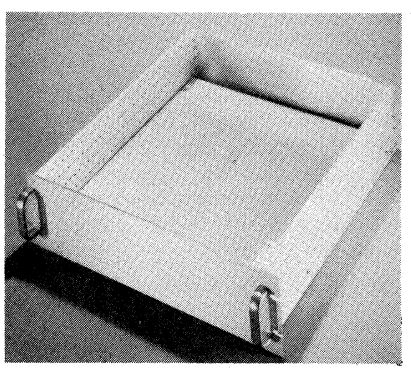


A basic SRK kit is ordered by adding dash numbers for any of seven heights and four depths. The kit will consist of one FP series Front Panel; two VPH Variable-Profile Handles, clear anodized with black vinyl decorative trim; two SF-SE series Side Frames with Seven-eighths-inch (vert-spacing) hole pattern; two HMP series Heavy-duty Mounting Panels (one for use as a rear panel, the other as an internal mounting panel); two PANC series Perforated Aluminum Non-sliding Covers (top/bottom); and all assembly hardware. Side-hinged or bottom-hinged front panels, card cages (see below), oval-section or T-section handles, full-bottom plates & thousands of other variations of parts and accessories can be ordered by adding dash numbers; or for even wider varieties & more combinations, order by individual part numbers from our incredible inventory.

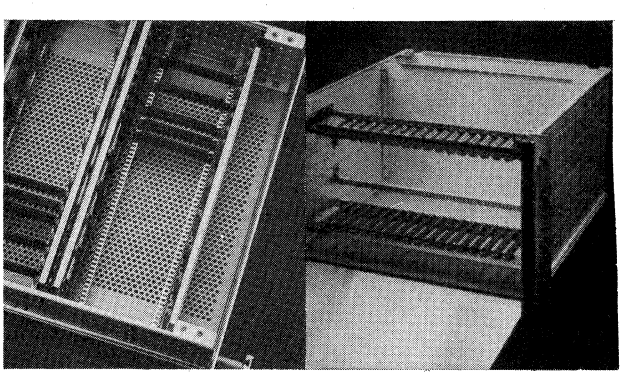
CRK Kits and Parts

A basic CRK kit consists of one FP series Front Panel, which like the SRK line is notched for assembling to tapped rails of rack; two OSH series Oval Section Handles, clear anodized; two SF-SE series Side Frames with Seven-Eighths vert-spaced hole pattern; one HMP series Heavy-Duty Mounting Panel (for use as rear panel); one FBP series Full-Bottom Plate for use as a chassis base, captive nuts pre-installed. All parts except handles are clear-chem-filmed (clear Iridited). All assembly hardware included.

As with the SRK line, thousands of options can be ordered by the use of dash numbers. For example, use kit number CRK-8H-15D to obtain the kit for the assembly shown at right:



QCC Card Cage Kits and Parts



One of the most popular series of auxiliary parts of the SRK/CRK line are these QCC Quarter-inch Card Cage kits & parts with .25-inch pitch. They include connector rails which will accommodate almost any card connectors & backplanes, guide frames and snap-in card guides in your choice of three guide lengths: 3.15", 4.65" and 6.15". They assemble for front, back, top or bottom loading. Because the assembly method permits much variability, a large selection of card lengths and widths can be accommodated. The ACC series card cages with .20-inch pitch are also still available from stock.

BKCD series
BasiKit Chassis Drawer
Same-day/next-day shipping

Here's Techmar's new economy line of chassis drawers. Not "economy" at the expense of quality and strength. It's strong and simple, & stocked in 3, 4, 5 and 6 EIA height units & in three front-to-back depths, nominally 12", 18" & 24". All parts clear-chemfilmed (clear Iridited) so you can have them refinished in any way you want after machining for your circuitry. The internal width is 16.70, the same as in the VCD/VSA line, so the internal parts are interchangeable (see pages 1 & 2 of this ad). And when your budget committee sees what you got for such a moderate price, you'll be a super-hero!

DESCRIPTIONS OF PAINTS LISTED ABOVE

4c SERIES OF GOLD CONTACT REPLACEMENTS

May be carried as a shirt pocket kit for field repair of worn or defective gold plated contacts or to upgrade base metal contacts. It is applied in seconds as part of normal trouble shooting procedure. Each $68, shirt pocket kit for electronic field service representatives can save over $3520 in reduced board float, call-backs, and preventative maintenance.

May also be applied on original equipment contacts by production methods. There is no need for electroplating equipment, chemical disposal, or product design changes except for the elimination of gold plating and the substitution of a 4c material by far simpler application methods which may include brushing, dipping, spraying, or banding. Even electronic and electrical battery-operated games and toys can have the dependability of gold without the cost.

These 4c gold substitutes offer one of the most effective technologies available to increase reliability in two areas: A — Reducing the cost and consumer irritation of servicing the millions of your products already in the field, and, B — By adding them to your future production, assure maximum reliability and the reputation that results from reduced manufacturing costs and reduced field repairs. SHIELDING LARGE STRUCTURES FROM ELECTROMAGNETIC INTERFERENCE (EMI)

New Shielding Method:
Reduces cost up to 80%
Reduces time 90% to 95%
Simplifies planning
Stands rough treatment

FINALLY
Do-It-Yourself Shielding

The WORRY-FREE shielding for a building, a cabinet, or a phonograph cartridge.

The new NR2HF synthetic rubber shielding combines the three KEY advantages of, 1 — Fast, low cost application by painting, 2 — Very high shielding effectiveness (up to 90 dB and, 3 — Ability to survive warping, building settling, vibration, and shock that would crack prevous shielding paint or open the seams of metal enclosures. It is INSURANCE against FUTURE problems. Applied quickly in production or in the field by spray, roller, brush, or dip. Samples available to shielding consultants and to potential shielding users. CPA SERIES OF CONDUCTIVE ADHESIVES

These new circuit assembly materials provide a fundamentally new approach to simplifying a wide range of electrical connections such as surface mounted components, simplified connectors, and elimination of mechanical fasteners. For example, a pocket radio or TV set or wrist watch or washing machine or auto dash board circuitry can be designed to be assembled with far fewer parts and assembly operations. Surface mounted circuit board manufacture using the new Micro-Circuits assembly methods eliminates seven out of eight major items of assembly equipment and 57 of the 72 areas of cost that now limit acceptance of surface mounting. Like the 4c materials above, these products offer one of the most powerful new technologies now available for simplifying and miniaturizing electronic products. FREE DATA

AIRCRAFT ANTISTATIC AND RAIN EROSION RESISTANT PAINT

RSE100 paint is used for radomes and antenna covers. Used world-wide for over 20 years. One of our most goof-proof products. May be overcoated with decorative aircraft paints if our RA2 Antistatic Additive is mixed into the decorative paint to prevent static puncture damage and loss of antistatic effectiveness. RSE100 is very abrasion and chemical resistant as an antistatic flooring. May be overcoated with conventional floor coatings containing RA2 Antistatic Additive. RSE22 is similar to RSE100 but has a resistance of less than 200 ohms for shielding, ground planes on boat hulls, etc. FREE DATA

STATIC ELECTRICITY PROTECTION

Static electricity protection is becoming critically important in sensitive equipment, computer rooms, electronic warehouses, assembly lines and assembly benches, many hospital areas, chemical processing plants, and similar areas. The RSE100 Antistatic paint (see above) may be used on floors, walls, tables, furniture, etc. The RA2 Antistatic Additive (see above) permits the use of decorative, protective, and color-coding where such paints would previously have caused static problems. SC12, SC13. SC20, AND SC15 SILVER PAINTS

These are conductive silver paints and inks used to form "wires", electromagnetic shielding, cold soldering of fine wires, reversing contacts on recording tape, conductive areas on paper and plastic parts, adjusting resistors, coils, capacitors, and pots. They have been used by magicians and to indicate fracture of rocks and aircraft parts. SC20 is for human skin electrodes. FREE DATA

eem MINIGLOSSARY ENCAPSULATION

MATERIALS/HANDLING

Catalyst: A substance which changes the *rate* of chemical reaction. Very small quantities can cause fast change.

Conformal coating Sprayed or dipped. A thin conformal jacket which protects an assembly from moisture or other degrading environments.

Curing agent: See catalyst.

Hardener: See catalyst.

Hermetic: A permanent gas-tight seal.

RTV: Room Temperature Vulcanizing. Associated with silicone rubber sealants which vulcanize at room temperature.

Thermoplastic: Plastic materials which can be made to flow *repeatedly* with the application of heat.

Thermosetting: Plastics which once cured cannot be made to flow again.

Thixotropy: The property of a coating compound which has low viscosity when agitated, but which thickens when the agitation ceases.

Viscosity: Measured in units of *poise* or *centipoise*. The property of a liquid which resists internal flow. Low viscosity equates with thin and vice-versa.

PROCESSING

Casting: Parts or assemblies are placed in a mold. Encapsulating material is added and cured. Part is then removed from the mold.

Dip coating: Part or assembly is dipped into the encapsulating material. Final thickness is determined by number of dips, viscosity, rate of withdrawal, and temperature.

Embedding: Wherein an encapsulant substantially fills all voids in and about an assembly.

Impregnation: A process of encapsulation involving evacuating all air and then allowing the encapsulating material to flow in and fill all voids.

Molding: Similar to casting except this process usually implies multicavity molds and costly machines.

Potting: Wherein the part or assembly is immersed in an encapsulating material contained in a shell which becomes a permanent outer surface after curing.

DIELECTRIC

Arc resistance: An encapsulant's resistance to the formation of a conductive path or track. Measured in time.

Breakdown voltage: The voltage at which an encapsulant fails electrically.

Capacitance: The property of conductors and dielectrics which allows the storage of an electrical charge when the voltage is applied.

Corona: A luminous discharge of electricity due to air ionization when a certain voltage is reached. Can be internal or external. The formation of ozone can cause rapid deterioration of certain materials.

Dielectric: Insulator (Nonconductor.)

Dielectric constant: The property of a material that determines its ability to store electrostatic energy.

Dielectric strength: The ratio of dielectric breakdown to the thickness of insulating material.

Dissipation factor: The ratio of a dielectric material's energy losses.

Flashover: Point at which an electric discharge occurs around an edge or across a surface. Can result in a carbon track and permanent degradation.

Insulation resistance: (IR) An insulating material's total DC leakage.

Surface resistivity: The resistance of the surface of an insulating material to the flow of direct current.

Voltage endurance: Sometimes called corona resistance. The ability of a material to withstand the application of sustained high voltage.

Volume resistivity: The resistance of a material to direct current flow as a measure of volume. Expressed as ohm-centimeters.
